

Scorpion ZBG

ZBG is a permanent, highly protective coating that incorporates the characteristics of our best protective coating system. In addition to the incredible strength, slip-resistance and color stability, the ZBG protective coating will not support the growth of mold, mildew, bacteria, or in other words, zero biological growth – ZBG.

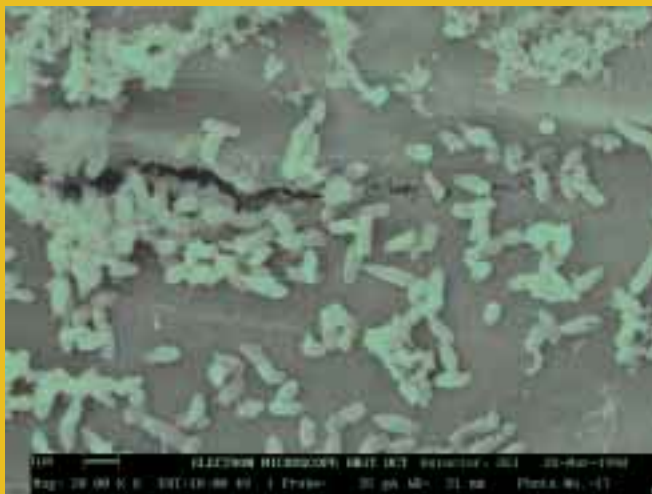

Bacterial Growth Results⁵

Bacterial Growth	No visible growth	Excellent	G-22
Bacterial Resistance	No visible growth	Excellent	modified G-22

Fungal Growth Results⁵

Mold Growth	No visible growth	Excellent	G-22
Mold Resistance	No visible growth	Excellent	modified G-22

These analysis results mean, quite simply, that the Scorpion ZBG product will not allow the growth of these organisms anywhere within or on the surface of our superior protective coating system.

Dangerous, life threatening bacteria and molds can cover even the cleanest looking surfaces. Eliminate this exposure and liability with tough, long lasting ZBG.
